MI Geospatial Steering Committee Meeting
Minutes/Action Items
May 1, 2008

Members Present:

Eric Swanson, Jeroen Wagendorp, Everett Root, Matt VanDyken, Ann Burns

Discussion Topics:

1. *Virtual Earth Mash Up*

The pilot has been completed and presented to Pure Michigan. Pure Michigan would like it on as soon as possible. We are looking to finalize the 1st phase development in May. This is integrated into a Virtual Earth Platform. Looking at pre-built itineraries, possible integration of DNR Parks, and camping could also be added to this platform. This would be a "One Stop Shop" for Travel and Recreation. Possible to fully integrate with other sites, for example, Boating Access Site (BAS). We are targeting a June launch to the public, and a Virtual Earth Enterprise License will drive it.

Jeroen will look into acquiring the Heritage Trail information for the site. Matt will send the Tulip Drive information for the site. Jeroen and Matt will send their information to Everett Root at CGI and Everett will work with John Clark to work the information into the program.

Questions:
- What is the availability for the public to add information to the site?
  - This would be possible through a process designed by Pure MI to collect content and verifying information before adding to the site.
- Can Linears be supported?
  - Yes, examples could include: bike trails, color tours, pre-planned trips, etc.

2. *Statewide Geospatial Assessment (Survey)*

Everett Root reported that the survey went live two weeks ago. The survey was sent out to 20 Counties the first day and another 20 Counties received the survey the next week. Out of the 40 Counties, we have had 12 responses. Out of the first 40 emails, only 1 email has been returned for an unknown address. MSU created and is hosting the survey.

3. *2010 Census*

We did a match up of the Census address files vs. the Drivers License files and we delivered 155,000 files that were in the Drivers License files, but not in the Census files.

We had an additional 20 jurisdictions that came in and an additional 65,000 addresses were supplied.

4. *Oakland E-Health*

We are currently working with the Department of Agriculture for the Food Inspection site. There are four (4) half-day workshops ready. There are eight Counties that want in on the program. Ingham County has great interest in this application. This will be a State hosted application and consumable for Local Government use.

5. *Other Matters*

Please bring your developers to the June meeting to Mash up any and all ideas.
